

ABSTRACT OF THE DISCLOSURE

5 A breast pocket for sweatshirts and method of manufacturing
for enhancing the usefulness of the sweatshirt and facilitating
carrying user accessories. The assembly includes a main portion
and a pouch member. The main portion includes a front panel, a
back panel, a neck opening and pair of arm openings. The front
10 panel also has a slit therein. The slit is preferably positioned over
either the right or left breast of the user when the main portion is
being worn. The pouch member has an opening. Most preferably
the opening of the pouch member is operationally coupled to the
slit of the front panel. The pouch member is preferably positioned
15 to abut an interior portion of the front panel. A closure device may
be provided to selectively close the opening of the pouch member.
